WORK EXPERIENCE

- | | |
|--|-----------------------------|
| IT Intern (Web & Collaboration), Alberta Health Services (AHS) | May 2026 – Present |
| <ul style="list-style-type: none">• Developing LLM and RAG-based solutions within a regulated healthcare environment, contributing to AI infrastructure that supports real-world clinical and operational use cases• Applying responsible AI practices to ensure solutions meet governance, compliance, and data integrity requirements in an enterprise healthcare setting• Collaborating with cross-functional IT teams to design and implement AI-powered tools addressing operational challenges at scale | |
| AI Student (Work Integrated Learning Project), Lemmer Spray Systems | September 2025 – April 2026 |
| <ul style="list-style-type: none">• Designed and trained a YOLO segmentation model (PyTorch/OpenCV) to detect hairline cracks on metallic surfaces, achieving 85%+ F1-score on industrial test data• Built a full-stack ML platform (React 18/Vite + FastAPI) with real-time training monitoring via WebSockets, live camera inference, multi-model switching, and automatic session resumption• Implemented Git-based CI/CD workflows and engineered a preprocessing pipeline over an annotated dataset of 11,273 images for production model deployment | |
| Data Analyst (Co-op)-Hasal Bank | September 2023-April 2024 |
| <ul style="list-style-type: none">• Analyzed large datasets using SQL, Excel, and Power BI to surface trends and support business decision-making across product and operations teams• Built and maintained self-serve Power BI dashboards for KPI monitoring, reducing manual reporting effort and improving data accessibility for stakeholders• Reconciled data across integrated systems to ensure data integrity and improve accuracy of financial and operational reports• Presented analytical findings to management through clear visual aids including trend analyses, charts, and summary tables | |
| Data Science Intern-Salpha Energy | May 2022 –August 2022 |
| <ul style="list-style-type: none">• Built predictive models in Python to forecast demand, supporting operational planning and resource allocation decisions• Automated reporting workflows using Python and SQL, improving efficiency of recurring analytical processes | |

EDUCATION

Southern Alberta Institute of Technology (SAIT)

Post-Diploma Certificate, Integrated Artificial Intelligence | 2026

GPA: 4.0/4.0

Landmark University

B.Sc. (Hons) Computer Science | Minor in Data Science | 2024

GPA: 3.6

TECHNICAL SKILLS

- AI & Machine Learning: Supervised/Unsupervised ML, Computer Vision, NLP, Generative AI, RAG, Agentic AI, LLM Evaluation (LLM-as-a-Judge), Prompt Engineering, PyTorch, TensorFlow, scikit-learn, YOLO (v8/v11), spaCy, SBERT, LangChain, Hugging Face, Ollama
- Programming & Engineering: Python, JavaScript, TypeScript, FastAPI, Flask, REST APIs, Docker, Git/GitHub, CI/CD, ETL, WebSockets
- Frontend: React 18, Next.js, Vite
- Databases & Vector Stores: SQL, PostgreSQL, SQLite, Pinecone
- Cloud & Platforms: AWS, Microsoft Azure, Anthropic SDK, ServiceNow, SharePoint
- Data & Analytics: Power BI, Tableau, Excel, Pandas, NumPy

PROJECTS

AI Health Check – AI Operations & Governance Platform

https://github.com/Oseleadeoye/ai_health_check

React 18, FastAPI, SQLite, Anthropic SDK, Python.

- Built a full-stack AI Operations platform (React 18 + FastAPI) with 47 backend endpoints integrating service health monitoring, automated incident triage, model drift detection, and compliance reporting
- Designed an LLM-as-a-Judge pipeline with Human-in-the-Loop controls, where a secondary model evaluates AI-generated outputs before human sign-off, with a tamper-proof audit log tracking every action
- Implemented a multi-layer AI safety pipeline covering sensitive data detection, access control, and automated budget enforcement to prevent unauthorized LLM usage in production

Medical AI Chatbot

<https://github.com/Oseleadeoye/Complete-Medical-Chatbot-with-LLMs-LangChain-Pinecone-Flask>

Python, LangChain, Flask, Pinecone, Ollama, Docker

- Built a RAG-based medical Q&A chatbot grounding LLM answers in a curated PDF knowledge base using LangChain, Pinecone vector search, and Hugging Face sentence-transformer embeddings
- Integrated a history-aware retriever to maintain multi-turn conversation context and deployed a Llama 3.2 3B model locally via Ollama with a Flask REST API
- Containerized with Docker and deployed to Render

Resume Match AI – NLP Powered Career Platform

<https://nlp-resume-matcher-eta.vercel.app>

Python (FastAPI), Next.js, TypeScript, spaCy, SBERT, Docker

- Built a production FastAPI backend with Docker deployment, serving an NLP engine that matches resumes to 100k+ job postings via a RAG-adjacent retrieval pipeline combining spaCy, SBERT, and TF-IDF
- Developed a parsing system for unstructured text documents, extracting structured signals from free-form resumes and job descriptions to improve match accuracy
- Deployed full-stack application enabling real-time job-candidate matching at scale

Thyra Predict – Thyroid Disease Prediction System

<https://thyrapredict-thyroid-prediction.onrender.com/>

Python | Machine Learning | Scikit-learn

- Developed and deployed a supervised ML model achieving 98.37% accuracy across 1,500+ clinical test cases.
- Engineered an end-to-end pipeline including preprocessing, feature engineering, model training, and evaluation.
- Optimized precision and recall across multi-class disease prediction, ensuring reliable diagnostic classification performance.
